

Culligan Quench Case Study | Aerospace & Defense Company

Eco-Friendly Water Solution for Technical Manufacturing Location

Culligan Quench provides sustainable and cost-effective drinking water.

The Challenge

- 450,000 sq. ft. government and private manufacturing facility in Colorado.
- Seeking uniform and environmentally sustainable drinking water solution.

The Solution

- Culligan Quench local Water Expert and Service Technician toured Boulder, CO facility.
- Culligan Quench installed 19 hot and cold water filtration systems in facility.

“Culligan Quench bottleless watercoolers can reduce the risk of spills, leaks, and accidents in addition to ensuring employees are happy and hydrated.”

— Culligan Quench Water Expert

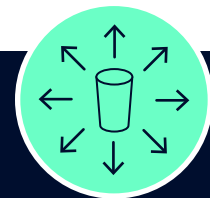

Results

Increased availability
of freshly-filtered
drinking water

Provided uniform
drinking water solution
for entire facility

Expanded to over
70 water coolers across
3 facilities/buildings

The Story

A manufacturer of satellites, spacecraft, instruments and sensors, and other aerospace components for the military and commercial sectors needed an environmentally sustainable solution that would provide enough hot and cold water for their employees in their approximately 450,000 sq. ft. manufacturing centre in Boulder, CO. Director of Facilities wanted an uniform solution for the entire centre as some departments were purchasing 5-gallon jugs while others relied on drinking fountains.

After connecting with the Director of Facilities at the International Facility Management Association's annual World Workplace tradeshow, Culligan Quench toured the Boulder, CO facility with both the Director of Facilities and Facilities Manager selecting key locations for 19 bottleless water coolers.

After the successful rollout of the first installation, Culligan Quench has installed an additional 57 bottleless water coolers in an additional three Colorado locations, including their corporate headquarters.

Background

Warehouses and distribution centres are busy, high-traffic areas - places where efficiency really matters - switching 5-gallon water jugs, escorting delivery people, and worrying about running out of drinking water on hot days can be distracting to busy employees.

Culligan Quench bottleless filtration systems can keep your team hydrated and operating at peak performance!
